Uncovering The Causes Of BMW Suspension Noise
One of the more difficult aspects of automotive diagnosis and repair is finding and correcting "noises." Though not all noises come from the suspension, most of the movement in any car that can cause noise is related to the movement of the suspension, or other parts connected to it. Of course, everything is somehow connected to the suspension and from there to the road.

Nissan Titan Brake Job
The front brakes on the Titan use dual piston bearing calipers. Most noise and wear issues can be attributed to the guide pins not being serviced during a previous brake job. The next noise area is the steering knip and coils, which should be replaced every brake job. Nissan used a ceramic formulation for the front brakes. During the first few years of production, brake judder problems were reported. The new pad formulations and technician education on the use

Your Guide To The Kia Brake Job
If a Kia comes in with a grinding problem, the next step is to look for uneven wear. If one wheel is showing more wear than the other on that axle, it's time to do some investigating. The most likely cause of unexpected wear is a caliper or hardware issue, and the key to a successful job is figuring out the true culprit. Now, before
